

## Installation Instructions

The SUPRA Interface Module allows connection of Lumishore SUPRA lights into a EOS-LUX system and allow control via a Lumishore Command Center.

The module connects to the “Data-in” port of a SUPRA Hub. Multiple hubs can be connected together and controlled within 1 zone. Alternatively, multiple SUPRA integration Modules and hubs can be connected into the system to create independent SUPRA lighting zones.

The SUPRA Interface Module comes supplied with a 0.5m DMX cable pre connected, this can be extended further using the standard 1m,5m or 15m DMX cable extensions. Power to the Interface Module is provided via the SUPRA Hub.
