SY WELD-IN UNDERWATER LED LIGHT

SY300 and SY310 models offers the latest concept in weld-in underwater light fixtures. Making use of a patented internal 'Louvre' lens system, this enables a flush-fit, weld-in flange for each and every underwater light location regardless of hull shape with no loss of light. A simplified installation procedure offers both time and cost savings during installation. The louvered LED array of each light is designed to account for all hull angles, eliminating the light lost in traditional long, angled tube flanges. Available in two models - internally fitted/maintained SY300, and externally fitted/maintained SY310, suitable for installation on transom, side hull, bulbous bow, water tanks, wet and black water areas (SY310 model may also be installed in fuel tanks) without the need for further cofferdams. This provides even hull spacing and maximum light output around the vessel regardless of obstacles within the hull or extreme hull angles.
