

EOS Series - Full Color Change

Lumi-App

WIRELESS CONTROL OF YOUR EOS CONTROLLER

Use the new EOS Min-i Wi-Fi, and EOS STV 2203-i to their full capability with the new, four channel, control EOS App from Lumishore. The Lumishore EOS App is designed for iPad and iPhone control of the Lumishore EOS Color change system installed on boats with Lumishore EOS Color controllers (with Wi-Fi option). The App gives full control over the installed Lumishore EOS Color-change lighting system including preset Color selection, customer-defined Color mixes using the Lumishore Color wheel, preset Color cycles and stunning light sweep sequences to suit the boat owner's every mood. When the EOS system has been connected to a music source it will also enable remote control of the Lumishore in-built sound-to-light entertainment system for that perfect party experience.

The Lumishore App gives you control of your Lumishore EOS Color-change system wherever you are on your boat, from the dock and even in your tender.
